

## Can you use Excel with MicroLab?

---

MicroLab's data acquisition and analysis software provides transparent one-click export of both standard MicroLab data and *FASTspec* spectrophotometric data to Excel.

Microsoft Excel is an international standard for general-level data organization, analysis, and graphing. Some faculty prefer that their students use Excel for their analysis and reports. Excel also provides advanced analysis and graphing functions not provided by MicroLab's general purpose software.

MicroLab's software provides a one-click export of data to Excel.
